**PDS2015-MUP-98-014W2, PDS-2015-RP-15-001, LOG NO. PDS2015-ER-98-14-016B;
SCH NO. 2015081025; EL MONTE SAND MINING PROJECT**

Public review period ends on Monday October 29, 2018 at 4:00 P.M.

These formal questions/objections are being delivered to the San Diego County Board of Supervisors and the DPS:

1. Formal petition from property owners in Sphere of Influence presented to Supervisors and DPS - majority objecting.
2. Why did the Supervisors and DPS not stop this permanently and remove the Sand Mining zoning off title when majority constituency objects?
3. Did the zoning change in 1970's whereby sand mining was added, go to public review and if not why?
4. How much in costs and fees has the DPS received to date for the sand mining process? Has other County Departments received income from it?

Air quality, water quality, traffic, noise, possible loss of personal water wells and costly equipment - Possible alternate costs of new bond issues to augment new source, inflated cost of new water service and product. All negative impacts.

Federal grants and reclamation funding - token repair from damage caused by sand mining:

There is visual and physical evidence from San Diego to Lakeside, of the state of disrepair from Sand Mining

The so called reclamation that does exist, is primarily little used dirt pathways and/or fences keeping the public out like Hansens pond.

Agencies like "Conservancies" are parasitic in nature, advertising the good they will provide in exchange for their participation/ownership of what ever is left after sand mining.

County oversight has proven non existent on these projects. Where is oversight?

The County has identified El Monte Valley as a valuable mineral/sand through the State governing agencies.

Why has the County and State ignored the source in Imperial Valley where there seems to be unlimited sources? There would be little to no impact on business or residences, close source to highways where little to no impact to people will occur. These lands would probably be utilized without purchasing from the Federal Government and if costs of transportation is a factor as stated in El Monte Valley, then the question of how US Gypsum has survived all these years transporting their product interstate.

September 1, 2015: Requested how the Helix property zoning changed and "was there public notice & review?"

**PDS2015-MUP-98-014W2, PDS-2015-RP-15-001, LOG NO. PDS2015-ER-98-14-016B;
SCH NO. 2015081025; EL MONTE SAND MINING PROJECT**

Public review period ends on Monday October 29, 2018 at 4:00 P.M.

Continued:

Conflicts of Interest:

Supervisors vote regarding matters in the County of San Diego, even outside their district.

Supervisors should vote for projects/issues within their respective districts.

It is each Supervisors responsibility to "Represent" and that would mean Constituency representation, not all County Supervisor districts.

DPS receives funding from issuing permits and charging for inspections etc.

DPS fiscal operations are fee based and subject that entity to bias during planning and fee generating operations.

This should discontinue and that Department should operate in concert with all other agencies by tax based operations.

Appointments to Planning Board by Supervisors currently has issue with a Supervisor and Chair of the Planning Commission - sand mining permit involvement.

Has the County, State or Traffic Engineering taken a metered profile of El Monte Rd. during summer & winter months? Will there be one taken now to have a benchmark for traffic, "after" any approved mining occurs.

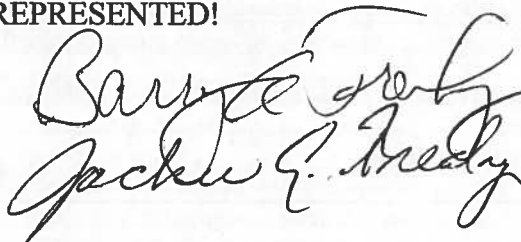

Has the County, State or Environmental Protection Agency taken an air quality in El Monte Valley recently? Will any of those agencies do air quality during any permitted sand mining?

Barry A. Treahy of 14775 El Monte Rd, Lakeside Ca. 92040 circulated a petition of yes or no to Sand Mining within the "Sphere of Influence" as designated by the DPS.

It is a unanimous "NO"!

Therefore, having a Democratic system of operations, the majority under "Representative Government" must be REPRESENTED!

Jackie A. Treahy
Barry A. Treahy

SAND MINING

Your opinion regarding whether Sand Mining should occur in the "Hot Zone" of El Monte Valley is requested. If enough responses are received that object, it will be forwarded to those in Government that will decide.

The "hot zone" is the 116 properties +/- in what Helix Water stated as: "Sphere of Influence" during the Sewer to tap and Sand mining application. On one of their documents it stated, if your property was within 1000' of the Helix property for Sand Mining and Sewer to Tap, you were considered in the critical area. While discussing the project today, it was discovered that this current application only considers 300' as the "Sphere of Influence" aka Hot Zone. The planner agreed to request it be inclusive to 1000' to allow the proper numbers of properties to have a say, as in the Sewer to Tap/Sand Mining application.

This is referred to as Hot Zone because most of the 116 properties circumvent the Helix property and will be subject to everything negative brought out at the last meeting. If you did not attend, please know that the main concern is Health, Air quality, Noise, traffic, well water pollution, well water shortages like what happened when Barona over pumped their systems.

Other issues count, like horse trails and property values, however taking care of the above will allow better things to settle out at the conclusion.

Please indicate on this memo your position of support and mail it back to us ASAP so we can direct a clear, one track course for El Monte Valley property owners and residents as well as present the results at the next public hearing.

SAND MINING

Your opinion regarding whether Sand Mining should occur in the "Hot Zone" of El Monte Valley is requested. If enough responses are received that object, it will be forwarded to those in Government that will decide.

The "hot zone" is the 116 properties +/- in what Helix Water stated as: "Sphere of Influence" during the Sewer to tap and Sand mining application. On one of their documents it stated, if your property was within 1000' of the Helix property for Sand Mining and Sewer to Tap, you were considered in the critical area. While discussing the project today, it was discovered that this current application only considers 300' as the "Sphere of Influence" aka Hot Zone. The planner agreed to request it be inclusive to 1000' to allow the proper numbers of properties to have a say, as in the Sewer to Tap/Sand Mining application.

This is referred to as Hot Zone because most of the 116 properties circumvent the Helix property and will be subject to everything negative brought out at the last meeting. If you did not attend, please know that the main concern is Health, Air quality, Noise, traffic, well water pollution, well water shortages like what happened when Barona over pumped their systems.

Other issues count, like horse trails and property values, however taking care of the above will allow better things to settle out at the conclusion.

Please indicate on this memo your position of support and mail it back to us ASAP so we can direct a clear, one track course for El Monte Valley property owners and residents as well as present the results at the next public hearing.

The planner agreed to request it be inclusive to 1000' to allow the proper numbers of properties to have a say, as in the Sewer to Tap/Sand Mining application.

This is referred to as Hot Zone because most of the 116 properties circumvent the Helix property and will be subject to everything negative brought out at the last meeting. If you did not attend, please know that the main concern is Health, Air quality, Noise, traffic, well water pollution, well water shortages like what happened when Barona over pumped their systems.

Other issues count, like horse trails and property values, however taking care of the above will allow better things to settle out at the conclusion.

Please indicate on this memo your position of support and mail it back to us ASAP so we can direct a clear, one track course for El Monte Valley property owners and residents as well as present the results at the next public hearing.

SAND MINING

Your opinion regarding whether Sand Mining should occur in the "Hot Zone" of El Monte Valley is requested. If enough responses are received that object, it will be forwarded to those in Government that will decide.

The "hot zone" is the 116 properties +- in what Helix Water stated as: "Sphere of Influence" during the Sewer to tap and Sand mining application. On one of their documents it stated, if your property was within 1000' of the Helix property for Sand Mining and Sewer to Tap, you were considered in the critical area. While discussing the project today, it was discovered that this current application only considers 300' as the "Sphere of Influence" aka Hot Zone. The planner agreed to request it be inclusive to 1000' to allow the proper numbers of properties to have a say, as in the Sewer to Tap/Sand Mining application.

This is referred to as Hot Zone because most of the 116 properties circumvent the Helix property and will be subject to everything negative brought out at the last meeting. If you did not attend, please know that the main concern is Health, Air quality, Noise, traffic, well water pollution, well water shortages like what happened when Barona over pumped their systems.

On one of their documents it stated, if your property was within 1000' of the Helix property for Sand Mining and Sewer to Tap, you were considered in the critical area. While discussing the project today, it was discovered that this current application only considers 300' as the "Sphere of Influence" aka Hot Zone. The planner agreed to request it be inclusive to 1000' to allow the proper numbers of properties to have a say, as in the Sewer to Tap/Sand Mining application.

This is referred to as Hot Zone because most of the 116 properties circumvent the Helix property and will be subject to everything negative brought out at the last meeting. If you did not attend, please know that the main concern is Health, Air quality, Noise, traffic, well water pollution, well water shortages like what happened when Barona over pumped their systems.

Other issues count, like horse trails and property values, however taking care of the above will allow better things to settle out at the conclusion.

Please indicate on this memo your position of support and mail it back to us ASAP so we can direct a clear, one track course for El Monte Valley property owners and residents as well as present the results at the next public hearing.

Your opinion regarding whether Sand Mining should occur in the "Hot Zone" of El Monte Valley is requested. If enough responses are received that object, it will be forwarded to those in Government that will decide.

The "hot zone" is the 116 properties +/- in what Helix Water stated as: "Sphere of Influence" during the Sewer to tap and Sand mining application. On one of their documents it stated, if your property was within 1000' of the Helix property for Sand Mining and Sewer to Tap, you were considered in the critical area. While discussing the project today, it was discovered that this current application only considers 300' as the "Sphere of Influence" aka Hot Zone. The planner agreed to request it be inclusive to 1000' to allow the proper numbers of properties to have a say, as in the Sewer to Tap/Sand Mining application.

This is referred to as Hot Zone because most of the 116 properties circumvent the Helix property and will be subject to everything negative brought out at the last meeting. If you did not attend, please know that the main concern is Health, Air quality, Noise, traffic, well water pollution, well water shortages like what happened when Barona over pumped their systems.

Other issues count, like horse trails and property values, however taking care of the above will allow better things to settle out at the conclusion.

Please indicate on this memo your position of support and mail it back to us ASAP so we can direct a clear, one track course for El Monte Valley property owners and residents as well as present the results at the next public hearing.

SAND MINING

Your opinion regarding whether Sand Mining should occur in the "Hot Zone" of El Monte Valley is requested. If enough responses are received that object, it will be forwarded to those in Government that will decide.

The "hot zone" is the 116 properties +- in what Helix Water stated as: "Sphere of Influence" during the Sewer to tap and Sand mining application. On one of their documents it stated, if your property was within 1000' of the Helix property for Sand Mining and Sewer to Tap, you were considered in the critical area. While discussing the project today, it was discovered that this current application only considers 300' as the "Sphere of Influence" aka Hot Zone. The planner agreed to request it be inclusive to 1000' to allow the proper numbers of properties to have a say, as in the Sewer to Tap/Sand Mining application.

This is referred to as Hot Zone because most of the 116 properties circumvent the Helix property and will be subject to everything negative brought out at the last meeting. If you did not attend, please know that the main concern is Health, Air quality, Noise, traffic, well water pollution, well water shortages like what happened when Barona over pumped their systems.

Other issues count, like horse trails and property values, however taking care of the above will allow better things to settle out at the conclusion.

Please indicate on this memo your position of support and mail it back to us ASAP so we can direct a clear, one track course for El Monte Valley property owners and residents as well as present the results at the next public hearing.
